Refresher Training: Those employees who are trained in accordance with paragraph (q) (6) of 1910.120 shall receive annual refresher training of sufficient content and duration to maintain their competencies, or shall demonstrate competency in those areas at least annually. OSHA CFR 1910.120(q)(8)(i)

Outcomes: The 8-hour Operator course is designed to cover the skill requirements expected of an Emergency Response Operator as presented in OSHA CFR 1910.120(q). The course is designed for ammonia specific users and responders. The Operator will be trained on how to support the emergency response effort by using defensive strategies (not entering immediately dangerous to life and health atmospheres IDLH) and support functions for the Technician Responder who would enter atmospheres greater than the IDLH of ammonia.

Training Outline for 8-Hour Class

1. Know how to implement the employer's emergency response plan.
2. Understand the various identification and labeling systems monitoring equipment used for Ammonia.
3. Function within an assigned role in the Incident Command System.
4. Know how to select and use proper specialized chemical personal protective equipment provided to the hazardous materials technician.
5. Understand the Hazards, Risks, and Threats specific to your facility and perform a Hazard Analysis.
6. Be able to perform control, containment, and /or confinement operations within the capabilities of the resources and personal protective equipment available to the Emergency Response Team.
7. Perform and implement decontamination procedures.
8. Perform termination procedures.
9. Perform basic chemical and toxicological terminology and behavior.

Course includes lunch, an interactive workbook with up-to-date information, and an engaging hands-on-experience.
